NeoWell — Pricing & Payments Proposal

22 October 2026 · Proposal for discussion · prices in FCFA (XAF)

Summary

Keep everything that protects a baby free, and earn from doctor time. NeoWell takes a 15% commission on paid consultations (already built), then adds an optional family plan and sponsored programmes for hospitals and NGOs. Mothers pay with MTN Mobile Money or Orange Money through one licensed payment aggregator; doctors are paid weekly to their mobile money number.

All prices below are proposals, to test with mothers and doctors before launch.

What can be priced

The rule: never charge for anything that tells a mother her baby is in danger. Doctor time, convenience and organisations are what NeoWell sells.

Feature in the app	Who would pay	Proposal
Daily checks, red/yellow/green result, emergency advice, nearest facilities, reminders, growth tracking	—	**Free, always**
Teleconsultation by chat, voice or video (booking, payment, chat, call, referral, drug chart)	Mother or family	Paid per consultation; NeoWell keeps a commission
"Available now" urgent consultation	Mother or family	Small surcharge on top of the doctor's fee
3- or 7-day summary report for a doctor (PDF)	Mother	Free inside a consultation; in the family plan otherwise
Medicine reminders, extra babies, priority doctor matching, consultation credits	Mother or family	Family plan (NeoWell Plus)
Discharge follow-up for a hospital's newborns; programmes for NGOs, insurers, employers	Hospital, NGO, insurer	Sponsored seats per baby
Doctor listing, verification, payouts	Doctor	Free to join; NeoWell earns only through the commission

Proposed prices

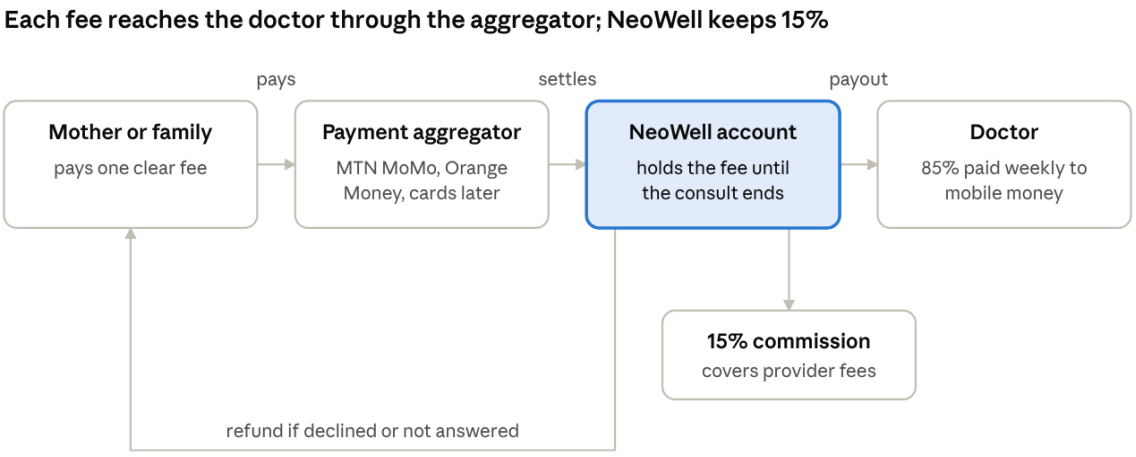

Doctors set their own fees inside a band NeoWell controls, so prices stay affordable and comparable. The app already charges per medium, fixes the commission at booking and refunds when a doctor declines or does not answer.

Offer	Price (XAF)	NeoWell earns	Notes
Chat consultation	1,500 – 3,000 (default 2,000)	15% (300 on 2,000)	Chat stays open 24 h after completion
Voice consultation	3,000 – 5,000 (default 4,000)	15%	
Video consultation	4,000 – 8,000 (default 6,000)	15%	Takes the doctor's full attention
Urgent "available now"	+ 1,000 on any medium	15% of the total	Doctor answers within the deadline or the mother is refunded
NeoWell Plus (family plan)	1,500 per month	All of it	1 chat consultation a month, summary PDFs, medicine reminders, priority matching, up to 3 babies
Consultation bundle	5,000 for 3 chat consultations	15%	Valid 3 months; good for preterm or KMC babies
Sponsored follow-up	2,500 per baby, first 3 months	All of it	Paid by a hospital, NGO or insurer; the mother pays nothing

Worked example: a 2,000 chat consultation pays the doctor 1,700 and leaves NeoWell 300, out of which the mobile money fee is paid. The platform should absorb that fee so the mother sees one clear price.

Payment options

Use one licensed aggregator that covers both MTN Mobile Money and Orange Money, collects payments and sends doctor payouts through a single integration. The app's payment code already has a provider interface, so the aggregator is one adapter.

Money flow for one consultation. The refund path is automatic today: a declined or unanswered request returns the full fee to the payer's number.

Option	Use	When
MTN Mobile Money and Orange Money via an aggregator	All mothers; doctor payouts	Launch
Direct operator contracts (MTN, Orange)	Lower fees at higher volume	Later, if volume justifies two contracts
Visa / Mastercard via the same aggregator	Relatives abroad paying for a consultation or a plan	Phase 2
Sponsor codes	Hospital, NGO or insurer programmes: the mother pays nothing	Partnerships

Aggregators to compare include CinetPay, Campay and Notch Pay; their fees (about 2–3.5% per payment) and payout terms are approximate here and must be confirmed with each provider.

Rollout and decisions

Start with paid consultations only, then add plans once real usage shows what mothers value.

1. **Launch:** free core + paid consultations through one aggregator. Already built; only the live provider adapter and its account are missing.
2. **After about 3 months:** NeoWell Plus and consultation bundles, priced from the first months' usage.
3. **Partnerships:** sponsored follow-up for hospitals, NGOs and insurers, with sponsor codes in the app.

Risks: price is the main barrier, so fees stay low and the core stays free. Mobile money fees eat into a 300 XAF margin. Telemedicine and payment rules in Cameroon must be checked with a lawyer, and using a licensed aggregator keeps NeoWell out of holding money itself.

Decisions needed

- ☐ Confirm the 15% commission, or set a different rate
- ☐ Approve the fee bands per medium
- ☐ Choose the payment aggregator after comparing fees and payout terms
- ☐ Decide if the family plan and bundles go into the first release or later
- ☐ Name a first hospital or NGO partner for a sponsored pilot
